

TASK: Adjust Fire.

CONDITIONS: During daylight, given a map of the target area, mobile device or computer, grid location of friendly troops, and a target.

STANDARDS:

1. Transmit a call for fire using proper procedures, in proper sequence, within seven minutes.

- Locate the target by grid coordinates (within 250 meters of the target location).
- Determine the direction to the target within.
- Transmit the call for fire to the fire direction center (FDC) on the fire direction net using the four essential elements of the call for fire:
 - Observer identification.
 - Warning order.
 - Target location (grid).
 - Target description.

2. After each round impacts, identify its point of impact as over, short, right, or left of the target and make proper adjustments. Determine deviation and range corrections if necessary.

3. Transmit corrections to the FDC quickly and accurately. Request fire for effect.

3. Observe the results of fire for effect and transmit refinement (if necessary), end of mission, and surveillance.
